Digital Printing

Sigma Line

Muller Martini in collaboration with Oce have provided a paper to book solution that takes digital book production to new levels in the world of digital book production.

The Sigma line in full production mode can produce up to 1000 books per hour. The Sigma line is the fastest fully integrated digital book production line in the digital book market.

The Sigma line can produce books in all formats similar to that which we produce by conventional lithographic printing, it also has the availability of matching the paper quality with which we use to produce our litho books and journals.
